

## Upgrading to Adulticiding v2.0

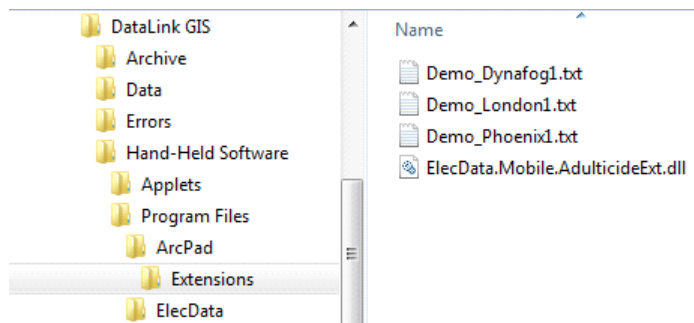

12/13/2010

### Issue:

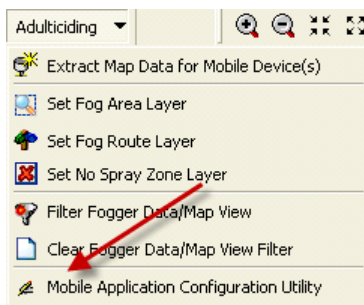

Adulticiding v2.0 is a free update to v1.1 that is supplied through the Sentinel GIS Patch Installer. Adulticiding v2.0 adds support for additional fogger brands, which involves some internal settings and schema changes. Additionally, Adulticiding architecture has changed such that an ArcPad extension handles data from any supported fogger type, then passes that information in a standardized format to the Adulticiding ArcPad applet. Specific steps must be taken to ensure that these updates are reflected on mobile devices, and that Adulticiding will successfully connect to a fogger on the mobile device.

### Solution:

1. Install the latest Sentinel GIS Patch installer. This will update the ArcGIS Desktop toolbar, the ArcPad Adulticiding applet, and will place the ArcPad Adulticiding Extension for deployment.

2. In ArcMap, select Adulticiding > Mobile Application Configuration Utility > Equipment tab.

3. Select an existing fogger and press Edit.

4. Specify a Fogger Type. The Baud Rate will be filled in automatically. Press Update.

5. Repeat for additional foggers.

6. Close the Configuration Utility.

7. Select Adulthooding > Extract. This will extract the updated equipment information for deployment to the mobile devices.

8. In DataLink GIS, Install and Send Files to each mobile device.
